## UQ Genetics and Genomics Winter School, Practical notes Basics, session 1

For the following matrices A-I:

- a. Write down the dimensions of the matrices
- b. Are there any special matrices (e.g. identity matrices).
- c. Are any matrices not full rank? What does 'full rank' mean?

$$A = \begin{bmatrix} 1 & 1 & -2 \\ 3 & 3 & 0 \\ 2 & -1 & 1 \end{bmatrix} \qquad B = \begin{bmatrix} 1 & 1 & 1 \\ 0 & 0 & 1 \end{bmatrix} \qquad C = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$B = \begin{bmatrix} 1 & 1 & 1 \\ 0 & 0 & 1 \end{bmatrix}$$

$$C = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$D = \begin{bmatrix} 2 & 1 \\ 0 & 4 \\ 1 & 2 \end{bmatrix}$$

$$E = D$$

$$E = D' F = \begin{bmatrix} 3 & 0 \\ 1 & 2 \end{bmatrix}$$

$$G = \begin{bmatrix} 1 \\ 3 \end{bmatrix}$$

$$H = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} \qquad I = \begin{bmatrix} 1 & 2 \\ 3 & 6 \\ 0 & 0 \end{bmatrix}$$

$$I = \begin{bmatrix} 1 & 2 \\ 3 & 6 \\ 0 & 0 \end{bmatrix}$$

Calculate the following, by hand. If the operation cannot be done note why.

- a. 2*B*
- b. BC
- c. BD
- d. *CB*
- e. B-E
- f. *C'*
- g. AH
- h. Which matrices have an inverse? Use R to calculate the inverse and show that (for example  $A^{-1}A = I$

Check your answers using the R code provided.
